The invention also discloses broad-range primers originating from the conserved regions of the topoisomerase genes of infection-causing bacteria, and a diagnostic kit containing the oligonucleotide probes and primers of the invention. The combination of oligonucleotide probes is useful for detecting, identifying or classifying infection-causing bacterial species, such as those causing respiratory tract infections. The primers are useful for amplifying topoisomerase genes especially genes encoding gyrB and parE proteins. The present sequence represents an oligonucleotide probe of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to a diagnostic method for detecting an identifying bacterial species that cause infections. The method compx contacting amplified DNA from a clinical sample with a desired combination of oligonucleotide probe sequences that hybridise under normal hybridisation conditions with hyper-variable regions situated normal hyper-variable regions normal hyper-variable regions normal hyper-variable regions norma

AAQ78833-Q78839 are 5' primers which separately pair with the 3' prime AAQ78840, for the PCR amplification of the human cycomegalovirus (HMCY antibody lambda 11ght chain variable regions. The complete antibodies could be used to detect HCMV, and anti-human HCMV Abs in human patient via a competitive immunoassay. The antibodies may also be useful in

patients

(HMCV)

                                                                                                                                                                                                                       This invention relates to novel oligonucleotide PCR primers which may be used to identify markers associated with genetic diseases and traits in dogs, in particular to diagnose genetic diseases that are not phenotypically visible and to identify carriers of recessive diseases. A specific application is diagnosis of copper toxicosis (CT). The invention can also be used to create a genetic map of the canine genome; to generate breed-specific profiles; to establish patternity and to identify dogs from DNA fingerprints. The method provides rapid analysis of the target sequences from only a small sample of DNA. Diagnosis can be done at any time in the dog's life. The present sequence is that of a PCR
                                                                                                                                                                                                            target sequences from on
at any time in the dog's
primer of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          PCR primers AAZ60770-78 were used to amplify DNA encoding the variable light chain of a human anti-Hepatitis C virus (HCV) antibody. The amplified sequence was used to construct antibodies of the invention.
These antibodies comprise at least one complementarity determining region (CDR) of the variable domain of a human antibody that specifically recognizes a conformation-dependent epitope of HCV glycoprotein E2 and is capable of precipitating covalently or non-covalently associated E2/E1 complexes. The antibodies are useful for preventing (re) infection of HCV and are useful for alleviating chronic Hepatitis C in a human or an animal. The antibodies are useful for diagnosing chronic Hepatitis C for the presence of neutralization of binding of HCV glycoprotein E2 on to tablet cells. The antibodies are useful for the treatment or prevention of HCV infection or reoccurrence of HCV infection, in which they are administered prior, during or after liver transplantation. The antibody is also useful in liver transplantation. The antibody is also useful for the prevention of infection of Tupaia-hepatocyte with HCV-infectious human sera
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

Cells in which both alleles of a gene are modified, comprising modifying CC one allele by insertion or replacement by a cassette having an CC expressible selectable marker and modifying other allele by recombination, of a promoter replacement fragment with a heterologous CC promoter, so that expression of the second allele is regulated by the CC promoter. (M1) is useful for constructing a strain of diploid fungal CC cells in which both alleles of a gene are modified. The diploid fungal CC cells in which both alleles modified are useful for identifying a gene that CC contributes to the survival or growth of a fungus, a gene that CC contributes to the resistance of a diploid fungus to an antifungal agent that inhibits the growth of a fungus to an antifungal CC agent, an antifungal agent that inhibits the growth of a diploid fungus CC and for identifying a therapeutic agent for treatment of a mammalian CC disease. (M1) is useful for identifying a compound which modulates the CC compound catabolism, biosynthetic, transporter, transcriptional, CC translational, signal transduction, DNA replication and cell division CC ability to inhibit growth or proliferation of C. abicans cells and for treating infection by C. albicans. The present sequence is that of a PCR CC primer used in the method of the invention. Note: The sequence data for CC this patent is not represented in the printed specification but is based CC on sequence information supplied to Derwent by the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Constructing strains for identifying gene products as effective targets for therapeutic intervention, by inactivating in the strain one allele of a gene and placing other allele of the gene under conditional expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               29-DEC-2000; 2000US-0259128P

The method of the invention involves administering a peroxisome proliferator activated receptor-delta (PPAR-delta) activator. The method of the invention is useful in the treatment of: inflammatory conditions; shock states (e.g. septic shock, haemorrhagic shock or traumatic shock); immune disorders; disorders of gastrointestinal motility (e.g. post-operative ileus); diseases of the central nervous system (e.g. migraine, CNS trauma, schizophrenia or sleep disorders); acute pain (e.g. musculoskeletal, post operative, or cancer); and HIV infection. The present DNA sequence represents a mouse inhibitor of
                                                                                                                                                                                                                                                       Mouse INOS anti-sense PCR primer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              of at least one target sequence. The method of analysis comprises comprises to hybridising at least one or more nucleic acids to at least two or more concluded and probes and detecting the hybridisation. The nucleic acid probes are attached to a solid support. The analysis comprises monitoring concludes are attached to a solid support. The analysis comprises monitoring concludes are attached to a solid support. The analysis comprises monitoring concludes acid nevels, identifying biallelic markers or polymorphisms, concluded acids further comprises a tag sequence. The array of nucleic acid probes is useful in in situ hybridisation, in Southern, Northern or dotton to identify or detect the sequence or specific mutations of any gene, in mapping the 5' termini of mRNA molecules by primer extensions or in screening cDNA or genomic libraries or subclones contained and previously sequenced. The sequence presented is one of the nucleic acid probes incorporated in the microarray. Note: The sequence concluded and previously sequenced in the microarray. Note: The sequence concluded and previously sequenced in the microarray. Note: The sequence concluded and previously sequenced in the microarray. Note: The sequence concludes and so be obtained in electronic format directly concluded and sequence and so be obtained in electronic format directly concluded and sequence and so be obtained in electronic format directly concluded and sequence and sequence and sequence are sequenced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

Also disclosed is a method of gene expression analysis. The array is used in monitoring gene expression levels by hybridisation to a DNA library, in analysis of genetic variation or in hybridisation of tag-labelled compounds. The nucleic acid probes are specifically designed for analysis of at least one target sequence. The method of analysis comprises
                                                                                                                                                                                                                             Gene expression analysis; array; hybridisation; genetic variation; tag-labelled compound; gene family; in situ hybridisation; library screening; Southern hybridisation; northern hybridisation; dot-blot hybridisation; gene sequence; mutation detection; target sequence; probe; PCR; primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New array of nucleic acid probes, useful for Southern, Northern or dot-blot hybridization

The present invention relates to nucleic acid sequences that are CC complementary to particular genes, and can be used as probes for a CC variety of analyses such as gene expression analysis. Each probe CC comprises 9 or more consecutive nucleotides from at least one of 14336 comprises 9 or more consecutive nucleotides from at least one of 14336 concleotide sequences defined in the patent, or their perfect sense match, CC sense mismatch, antisense match or antisense mismatch oligonucleotides. The probes may be used in an array comprising at least 10 distinct concleic acid probes. The array is useful in monitoring gene expression CC levels by hybridisation to a DNA library, in analysing genetic consecutions, and in hybridising tag-labelled compounds. The probes are useful for identifying family members of a gene. The probes are also useful in in situ hybridisations, in screening cDNA or genomic libraries (or derived subclones) for additional clones containing segments of DNA CC that have been previously isolated and sequenced, in Southern, northern, cc or dot-blot hybridisation of genomic DNA to identify or detect the CC sequence of any gene or detect specific mutations in any gene, and in CC sequence of any gene or detect specific mutations in any gene, and in CC sequence of the invention are also useful as PCR primers. CC complementary to particular genes with a wide range of analytical uses. CC The invention provides a large collection of nucleic acid sequences cC complementary to particular genes with a wide range of analytical uses. CC The sequence data for this patent was obtained in electronic format the target sequences of the invention. Note: The sequence data for this patent was obtained in electronic format complements.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New probe array useful e.g. for monitoring gene expression levels, for analyzing genetic variations, or for hybridizing tag-labeled compounds, comprises multiple nucleic acid probes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               antagonist activity of a compound, to screen a subject for a FIZZI related metabolic disorder, to measure the obesity-reducing activity of a modality, to reduce the metabolic activity of a subject, and to alter expression of FIZZI in the WAT of a subject. The FIZZI nucleic acids and proteins are useful in the treatment of metabolic disorders such as obesity, cachexia and increased metabolic rate caused by severe burns
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is that of a probe, designated mFIZZ1.probel, which was used in an example of the invention for quantitation of FIZZ1 (found in inflammatory zone-1) mRNA in mice. Results showed that FIZZ1 expression is markedly depressed in the white adipose tissue of obese, leptin-deficient ob/ob mice. The invention provides methods of using human and murine FIZZ1 polynucleotides, polypeptides and antibodies to increase metabolic activity in a subject, to measure the FIZZ1 agonist of the contract of
                                                                                                                                                                                                                                                                                                                                                          16-APR-1999;
                                                                                                                                                                                                                                                                                                                                                                                                          17-APR-2000; 2000EP-00108383.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Best
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                 A PCR primer (AAT34531) is based on nucleotides 1-22 of human Fas ant CDNA (see also AAT34536). It was used with a primer (AAT34536) complementary to nucleotides 1316-1336 of the cDNA to amplify human f mRNA from nucleotides 170-1336. The template mRNA was obtained from typeripheral blood mononuclear cells of healthy subjects and from systelupus erythematosus (SLE) and angioimmunoblastic lymphadenopathy patients. PCR products were cloned into a pCR vector, expressed in E. coli, and sequenced (see also AAT34533-34). 4 Distinct mRNA variants also AAT34527-30) were identified
                                                                                                                                                                                                                                                                                                                                                                                       Natural, soluble form of Fas antigen secreted by human cells : alternative mRNA processing - used to diagnose Fas-associated e.g. systemic lupus erythematosus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  oxobicyclo(3.1.0) hexane-6-carboxylate esters such that one enantiomer is in an ester form and the other enantiomer is in an acid form. The methods involve contacting 2-oxobicyclo(3.1.0) hexane-6-carboxylate ester with an enzyme which preferentially hydrolyses one enantiomer of the ester of 2-oxobicyclo(3.1.0) hexane-6-carboxylate to obtain one enantiomer as an acid and the other as an ester. The methods are used to resolve 2-oxobicyclo(3.1.0) hexane-6-carboxylates, which are useful as intermediates for pharmaceuticals. An example of an enzyme which may be used in the methods of the invention is an esterase from Chromobacterium SC-YM-1 (FERM BP-6703 transferred from FERM P-14009). The present sequence represents an oligonucleotide used to generate a mutant esterase and which was also used as a PCR primer in plasmid construction. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                        Example 1; Page 74; 152pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 23-DEC-1994;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                04-JUL-1996
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human Fas antigen 5'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAT34531;

                                                                                                                                             Matches
                                                                                                                                                                                                  A primer (AAT34533) is based on nucleotides 377-3912 of human Fas antiger cDNA (see also AAT34526). It was used with a primer (AAT34534) complementary to nucleotides 1059-1076 of the cDNA to sequence PCR products amplified (see also AAT34531-32) from fas mRNA derived from the peripheral blood mononuclear cells of healthy subjects and from systemic lupus erythematosus (SLE) and angioimmunoblastic lymphadenopathy patients. 4 Distinct mRNA variants (see also AAT34527-30) were identified
                                                                                                                                                                                                                                                                                                 Natural, soluble form of Fas antigen secreted by human cells is alternative mRNA processing - used to diagnose Fas-associated die.g. systemic lupus erythematosus.
                                                                                                                                                                                 Sequence 15 BP; 4 A; 7 C; 3 G; 1 T; 0 U; 0 Other;

98JP-00272744.

New proteins useful for desulfurization of crude oil have ability to control expression of benzothiophene oxidase group.

Example 1; Page 8; 43pp; Japanese.

encompasses genetic constructs and vectors comprising the genes encoding these proteins, hosts containing such constructs and the recombinant production of the enzymes. Pseudomonas sp. WF505 benzothiophene oxidase, benzothiophene oxidase co-enzyme and bto gene cluster regulator are useful in the desulfurisation of crude oil and petroleum products, and for the clarification of soil and waste water contaminated by organic sulphur compounds. Sequences AAA38401-A38423 represent primers used in the exemplification of the invention in the isolation and characterisation of the genes of the Pseudomonas sp. WF505 benzothiophene oxidase gene cluster. (Updated on 15-SEP-2003 to standardise OS field) benzothiophene oxidase co-enzyme (AAY97824), which controls benzothiophene activity via redox regulation. These enzymes are respectively encoded by the bto gene cluster open reading frames ORF2-16 (AAA38398), ORF4-9 (AAA38396) and ORF6-7 (AAA38395). The invention also The invention relates to proteins encoded by the benzothiophene oxidase (bto) gene cluster from Pseudomonas sp. WF505, specifically the protein which controls expression of the gene cluster (AAY97827), the benzothiophene oxidase (bto) enzyme itself (AAY97825) and a WF505 benzothiophene ORF2-16

This involves detecting the presence of a polymorphism located between D9312 and D9310 inclusive on human chromosome 9, which is linked to the gene associated with familial dysautonomia. Hence the presence of the polymorphism is indicative of the presence of the disease-associated gene. A nucleic aci sequence comprising the familial dysautonomia gene, and PCR primers encoding sequences flanking markers of the gene are useful for carrying out genetic testing of the disorder. This sequence represents a PCR primer used to detect the 88B2GA marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; genome-derived myosin-like protein 1; GDMLP-1; hGDMLP-1; hear muscle; myosin; chromosome 22; gene therapy; vaccine; heart disease; skeletal muscle disorder; amplicon; screening; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC protein 1 (http://linkup.nl). The protein and polynucleotide sequences of hGDMLP-1 CC nucleic acids can be used as probes to detect, characterise and quantify CC hGDMLP-1 nucleic acids in samples, as amplification substrates, to CC provide initial substrates for the recombinant engineering of hGDMLP-1 CC protein variants having desired phenotypic improvements, and for CC expressing the proteins. The hGDMLP-1 proteins or polypeptides may be CC used as immunogens to raise antibodies that specifically recognise hGDMLP CC -1 proteins, as standards in assays used to determine the concentration CC and/or amount specifically of hGDMLP specific biomolecule CC capture probes for surface-enhanced laser desorption ionisation, as CC therapeutic supplement in patients having specific deficiency in hGDMLP concentration, and in vaccines or for replacement therapy. The CC polynucleotide sequences encoding hGDMLP-1 may be used for diagnosing a CC disorder associated with the expression of hGDMLP-1, in particular heart and skeletal muscle disorders. hGDMLP-1 is localised to chromosome 22. The present sequence in the expression of the present invention. N.B. CC may be used for the present of the present and the screening of the sequence data for this patent did not form part of the printed content of the

                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                               ş
                                                                                                                                                                                                                                                                                                         The present invention describes a human genome-derived myosin-like CC protein 1 (hGDMLP-1). The protein and polynucleotide sequences of hGDMLP-1 cc l can be used in gene therapy and vaccine production. The hGDMLP-1 cc mucleic acids can be used as probes to detect, characterise and quantify conclude initial substrates for the recombinant engineering of hGDMLP-1 protein variants having desired phenotypic improvements, and for cexpressing the proteins. The hGDMLP-1 proteins or polypeptides may be used as immunogens to raise antibodies that specifically recognise hGDMLP cused as immunogens to raise antibodies that specifically recognise hGDMLP concentration and/or amount specifically of hGDMLP proteins, as specific biomolecule capture probes for surface-enhanced laser describing the concentration cand/or amount specifically of hGDMLP proteins, as specific biomolecule capture probes for surface-enhanced laser describing in the capture of the present in patient in patients having specific deficiency in hGDMLP-1 concentration, as characteristic production, and in vaccines or for replacement therapy. The polymucleotide sequences encoding hGDMLP-1 may be used for diagnosing a concentration of horder associated with the expression of hGDMLP-1, in particular heart concentration of the present sequence and the expression of hGDMLP-1 is concentrated to chromosome 22.

The sequence data for this patent did not form part of the printed capture with published not sequence format directly from WIPO can the wine int/mulnitaged not sequence format directly from WIPO

CC protein 1 (hgpMLP-1). The protein and polyuncleotide sequences of hGDMLP-1 can be used in gene therapy and vaccine production. The hGDMLP-1 conclete acids can be used as probes to detect, characterise and quantify composite the protein and substrates, to composite the protein substrates, to composite the protein substrates, to composite the protein variants having desired phenotypic improvements, and for composite the proteins. The hGDMLP-1 proteins or polypeptides may be used as immunogens to raise antibodies that specifically recognise hGDMLP-1 proteins, as standards in assays used to determine the concentration and/or amount specifically of hGDMLP proteins, as specific biomolecule capture probes for surface-enhanced laser desorption ionisation, as therapeutic supplement in patients having specific deficiency in hGDMLP-1 production, and in vaccines or for replacement therapy. The colymnicleotide sequences encoding hGDMLP-1 may be used for diagnosing a clistorider associated with the expression of hGDMLP-1, in particular heart and skeletal muscle disorders. hGDMLP-1 is localised to chromosome 22.

The present sequence represents an oligomer used in the screening of the hGDMLP-1 sequence in the exemplification of the present invention. N.B.

                  CC The present invention describes a human genome-derived myosin-like CC protein 1 (hdDMLP-1). The protein and polynuclectide sequences of hdDMLP-1 can be used in gene therapy and vaccine production. The hdDMLP-1 calds can be used as probes to detect, characterise and quantify chorule initial substrates for the recombinant engineering of hdDMLP-1 protein variants having desired phenotypic improvements, and for expressing the proteins. The hdDMLP-1 proteins or polypeptides may be used as immunogens to raise antibodies that specifically recognise hdDMLP-1 proteins, as standards in assays used to determine the concentration and/or amount specifically of hdDMLP proteins, as specific biomolecule capture probes for surface-enhanced laser description ionisation, as therapeutic supplement in patients having specific deficiency in hdDMLP-1 production, and in vaccines or for replacement therapy. The polynucleotide sequences encoding hdDMLP-1 may be used for diagnosing a disorder associated with the expression of hdDMLP-1, in particular heart and skeletal muscle disorders. hdDMLP-1 is localised to chromosome 22. The present sequence represents an oligomer used in the screening of the hdDMLP-1 sequence in the exemplification of the present invention. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from MIPO at first part of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                30-JAN-2001;

The present invention describes a human genome-derived myosin-like protein 1 (hGDMLP-1). The protein and polynucleotide sequences of hGDMLP-1 can be used in gene therapy and vaccine production. The hGDMLP-1 nucleic acids can be used as probes to detect, characterise and quantify hGDMLP-1 nucleic acids in samples, as amplification substrates, to provide initial substrates for the recombinant engineering of hGDMLP-1 protein variants having desired phenotypic improvements, and for expressing the proteins. The hGDMLP-1 proteins or polypeptides may be used as immunogens to raise antibodies that specifically recognise hGDMLP-1 proteins, as standards in assays used to determine the concentration and/or amount specifically of hGDMLP proteins, as specific biomolecule capture probes for surface-enhanced laser desorption ionisation, as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           30-JAN-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      therapeutic supplement in patients having specific deficiency in hGDMLP-1 production, and in vaccines or for replacement therapy. The polynucleotide sequences encoding hGDMLP-1 may be used for diagnosing a disorder associated with the expression of hGDMLP-1, in particular heart and skeletal muscle disorders. hGDMLP-1 is localised to chromosome 22. The present sequence represents an oligomer used in the screening of the hGDMLP-1 sequence in the exemplification of the present invention. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fit, wipo.int/pub/published_pct_sequence
acid molecule or an enzymatic nucleic acid molecule, that modulates expression of a nucleic acid molecule encoding HER2, K-Ras, H-Ras, N-Ras, human immunodeficiency virus (HIV) or a component of HIV. The nucleic acid molecule of the invention has cytostatic, anti-HIV, and anti-rheumatic activity. The nucleic acid molecules are useful for reducing HER2, K-Ras, H-Ras, and HIV activity in a cell. The nucleic acids are also useful for treating breast, ovarian, colorectal, lung, prostate, bladder, or pancreatic cancer, and HIV infection, and AIDS. The sequences shown in ABZ5989 - ABZ62216, ABZ64544 - ABZ65531, ABZ66520 - ABZ66524, ABZ66530 - ABZ66595 represent substrate/target sequences for the human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; ribozyme; short interfering RNA; siRNA; HER2; K-Ras;

```
CC fragments of at least 15 consecutive nucleotides of these nucleotides, a CC sequence having at least 80% identity, after optimal alignment, with the nucleotides, a sequence that hybridizes under stringent conditions with the cc nucleotides. The nucleotides are used as probes or primers for detecting, cidentifying, quantifying and/or amplifying nucleic acids, as in vitro cc sense and antisense sequences, of nucleotides involved in tumour cs suppression or reversion, apoptosis and or viral resistance, to produce recombinant polypeptides, and to prepare transgenic animals, as cc experimental models. The nucleotides (also vectors containing them and cc ells containing the vectors), the encoded polypeptides and antibodies (Ab) against the polypeptide are useful for prevention and/or treatment co f viral infections or diseases characterized by development of tumours or cell degeneration (e.g. Alzheimer's disease or schizophrenia).

CC Analysis of the expression of the nucleotides can be used for diagnosis can and/or prognosis of these diseases. The nucleotides and polypeptides can algo be used to screen for their specific interactive molecules, corponentially useful for treating diseases associated with abnormal corponentially useful for treating diseases associated with abnormal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                В

The oligonucleotides CC exemplify the invention. The specification describes oligonucleotides CC that contain 8-30 nucleotides, which contain at most 8 nucleotides that CC can each form three hydrogen bonds to cytosine; do not contain four CC consecutive nucleotides able to form three H-bonds each to four CC consecutive cytosines; do not contain two sequences of three consecutive cytosines; do not contain two sequences of three consecutive cytosines, and the ratio between residues able to form three H-bonds to three consecutive CC cytosines, and the ratio between residues able to form two H-bonds each CC (2R) or three such bonds (3R) is given by 2R/JR = 0.33-0.72. The CC cytosines, are used to modulate expression of genes, particularly CC the genes for p53, ErbB-2, junB, junD, TGF-beta 1 or beta 2 to control CC proliferation of primary cell cultures (e.g. bone marrow stem, liver or continue cells, osteoclaste, osteoblasts and/or keratinocytes). The CC altering their expression or activity) and therapeutically, e.g. in cases of first contain cases for p53, Farberson or activity) and therapeutically, e.g. in cases
                                                                                                             Human genome, biallelic marker; high density disequilibrium map, genomic map; haplotype; phenotype; polymorphic base; genotyping; haplotyping; hybridisation; identification; characterisation; haplotyping; hybridisation; identification; SNP; PCR primer;
                                                                                                                                                                                                                                                               Human biallelic marker downstream amplification primer SEQ ID NO:11752
                                                                                                                                                                                                                                                                                                                                            10-SEP-2001

Compositions and methods of the invention can also be useful for the identification of the targets for the development of pharmaceutical agents and diagnostic methods, as well as the characterisation of the differential efficacious responses to and side effects from pharmaceutical agents acting on a disease as well as other treatment. AZ69579 to AAZ77440 represent amplification primers for the biallelic markers. The biallelic markers of the invention have a variety of uses: they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states. Compositions and methods of the invention can also be useful for the identification of the targets for the development of pharmaceutical agents and diagnostic methods, as well as the characterisation of the identifications responses to and side effects from the pharmaceutical agents acting on a disease as well as other treatment. M. B. The SEQ ID NOS 2852, 2913, 2974, 3035, 3096, 3157, 3227, 3297 and correspond invention as sequence in the Sequence Listing from the corresponding invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention provides the transcriptional regulatory region of the human costeoprotegerin (opg) gene, and fragments exhibiting human opg gene transcriptional regulatory activity. The isolated opg nucleic acid created transcriptional regulatory activity. The isolated opg nucleic acid created regulatory activity. The isolated opg nucleic acid created resident are useful in an assay to identify an agonist or antagonist of composition. They are also useful for the manufacture of a composition for the diagnosis of a human susceptible to, predisposed to, or at created risk for developing a symptom, condition, or disease caused by cover- or under-expression of opg. The agonist, antagonist and modulators care useful in the treatment of a disease in a human caused by abnormal caused by abnormal caused by abnormal caused by abnormal immune function, abnormal lymph node development, or conditions, abnormal lymph node development, or conditions and invention. The specification has certain pages missing and the above mentioned primers are a part of pages from other patent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention provides the transcriptional regulatory region of the human osteoprotegerin (opg) gene, and fragments exhibiting human opg gene transcriptional regulatory activity. The isolated opg nucleic acid fragments are useful in an assay to identify an agonist or antagonist of opg expression. They are also useful for the manufacture of a composition for the diagnosis of a human susceptible to, predisposed to, or at concern of the diagnosis of of a composition of or increased risk for developing a symptom, condition, or disease caused by cover- or under-expression of opg. The agonist, antagonist and modulators are useful in the treatment of a disease in a human caused by abnormal expression of opg. The disease in a human caused by abnormal concession of opg. The disease is bone disease, arthritis, arterial concession of opg. The disease is bone disease, arthritis, arterial concess, abnormal immune function, abnormal lymph node development, or sequences ARRS3129-136 represent PCR primers which are not related to the present invention. The specification has certain pages missing and the above mentioned primers are a part of pages from other patent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        proteins responsible for cell attachment, spreading, motility, proliferation, cytoskeletal organisation, wound healing and angiogenesis. TSRX, TSRX polynucleotides and anti-TSRX antibodies are useful for diagnosing, treating or preventing cancer, rheumatoid arthritis, ocular neovascularisation, wound healing, immune associated disorders and gestational diseases (e.g. pre-eclampsia). TSRX and TSRX polynucleotides can be used to identify members of the TSR superfamily, to screen for molecules which inhibit or enhance TSRX activity or function, as targets for identification of small molecules that modulate or inhibit e.g. canglogenesis or neuronal development. Also TSRX antisense molecules or other agonists are useful for detecting and treating breast cancer. TSRX cartivity or expression as well as to treat disorders characterised by insufficient or excessive production of TSRX or production of TSRX forms that have decreased or aberrant activity compared to TSRX wild-type. Anti CTSRX antibodies can be used to isolate TSRXs and modulate TSRX activity. Portions or fragments of TSRX CDNAs are used as polynucleotide reagents or conduction of TSRX conduction of TSRX activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

The sequence represents a sequencing primer used to sequence the cDNA clone encoding the Human thrombospondin-1 repeat (TSR) domain contain

domain containing

antisense therapy

The present invention describes the human Zmax1 gene and the high bone mass (HBM) gene, which are found on chromosome 11q13.3. The Zmax1 and H genes have osteopathic activities. The genes can be used in gene thera

and in the production of

vaccines.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  និន្តិនិន្តិនិង្គ
The invention relates to a method for identifying a molecule involved in CC lipid regulation comprising identifying a molecule that binds to or inhibits binding of a molecule to high bone mass (HBM) or its wild type gene, Zmaxl. Compounds identified by the method are useful for treating, CC disgnosing, preventing or screening for normal and abnormal lipid-associated conditions, including arteriosclerosis, cardiovascular disease, stroke, and osteoporosis. The compounds may also be used in the treatment or prevention of diabetic atherosclerosis, neurovascular conditions caused by plaque build-up, poor circulation due to plaque build-up and associated poor wound healing. The methods may be used in gene thorapy, pharmaceutical development, and diagnostic assays for bone development disorders. Molecules identified by comparison of Zmaxl and HBM systems can be used as surrogate markers in pharmaceutical conditions can be used as surrogate markers in pharmaceutical conditions can be used as surrogate markers in pharmaceutical conditions can be used as surrogate markers, probes, linkers treatment of bone diseases. Sequences ABK22776-ABK23411 represent cDNA molecules encoding human Zmaxl and HBM, and PCR primers, probes, linkers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

RESULT 68
ACC45833
      The invention relates to novel transgenic animals expressing the high CC bone mass (HBM) gene, expressing the corresponding wild type HBM gene, CC comprising an alteration of the gene encoding LRP5 or LRP6, or expressing CC an LRP5 that is modulated by an altered gene control sequence introduced CC by homologous or non-homologous recombination. The transgenic animals are CC for the study of bone density modulation or bone mass modulation. The cinvention has osteopathic and cytostatic activity. The polynucleotides of CC invention may have a use in gene therapy. The transgenic animals and CC mucleic acids are for the study of bone density modulation, where the CC bone mass is modulated relative to non-transgenic animals of the same CC species in more than one parameter selected from bone density, bone CC transgenic animals, nucleic acids and methods are useful for identifying CC molecules involved in bone development, and for developing pharmaceutical compositions, which may be employed for treating or preventing bone CC neoplasms of the bone. The transgenic animals and nucleic acids are also cases, in hone development.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SXS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches

                                                                                                                                                                      The present invention relates to High Bone Mass (HBM), LRP5 (Zmax1) and LRP6 mutants, which results in a HBM-like phenotype when expressed in a cell. The HBM-like phenotype results in bone mass modulation and/or lipid level modulation. The invention is useful for diagnosing a HBM-like phenotype in a subject and for preparing a composition for modulating bone mass and/or lipid levels in a subject suffering from e.g. osteoporosis. The present sequence is a Sequence Tagged Site (STS) marker, which was used to prepare a physical map of the Zmax1 (LRP5) gene
                                                                                                                                                                                                                                                                                                                                                          New nucleic acid comprising a mutation diagnosing a HBM-like phenotype in a su composition for modulating bone mass ar suffering from e.g. osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               11-MAY-2001; 2001US-0290071P.

involves using a multiplex polymerase chain reaction assay having chromosome-specific short tandem repeat (STR) markers. The STR marker 21 328 (informal designation) is useful as a marker for the diagnosis of aneuploidy of a chromosome, particularly trisomy 21, 13, 18 or X, or Turner Syndrome. The STR marker Y-40S (informal designation) is useful a marker for the diagnosis of the sex of an individual. Marker CF508 is useful for detecting the presence or absence of a genetic disease, particularly cystic fibrosis. Sequences ABZ75621-22 represent PCR primer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Detecting aneuploidy of a chromosome in a fetus by using a multiplex polymerase chain reaction assay comprising chromosome-specific short tandem repeat markers.

ACH enzymes have a role in lipid oxidation, regulation of Coenzyme A pools and in fatty acid metabolism. Also include are a host cell transfected with the nucleic acid, a transgenic plant transfected with the nucleic acid (including its seed or oil) and ACH antisense molecules. The ACH nucleic acid is useful for altering a phenotype of a plant and for making a transgenic plant, by transfecting the plant tissue with the ACH nucleic acid under conditions such that a transgenic plant is generated. The ACH nucleic acid is also useful for producing variants of acyl-CoA thiosterace.

cc species. The method involves identifying a 3' untranslated region (UTR) cc of a gDNA sequence, designing probe, performing PCR, separating the cc product by size differentiation and performing PCR, separating the cc product by size differentiation and performing a second PCR to amplify cc the predetermined sequence. Also claimed is a biological analysis device, cc gequences, located on the substrate, which are generated by the method cc above and a DNA high-density microarray comprising a substrate upon which are generated by the method cc are deposited an array of biosites of genomic DNA fragments having the sequence, where the genomic DNA fragments have a sequence length of from cc sequences, where the genomic DNA fragments have a sequence length of from capturing in microarray formats, fabricates high-density DNA arrays of large quantities of gDNA probes, which enables greater efficiency for cc printing in microarray formats, fabricates high-density DNA arrays of derived sequences by simple PCR amplifications without cloning. The method produces amplified sequences that have greater specificity and cc size consistency than that observed with cDNA fragments, and allows for greater signal sensitivity than oligonucleotides. The sequence presented cc is a Type II gene specific primer
The invention discloses a method for amplifying expressed genetic sequences from genomic DNA (GDNA) from mammalian or higher order plant sequences from genomic DNA (GDNA) from mammalian or higher order plant sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Amplifying expressed genetic sequences from genomic DNA of mammalian or higher order plant species for printing on DNA microarrays, involves using the 3' untranslated region of the gene sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Disclosure; Page 7; 15pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC further comprise sense and antisense regions, or alternatively are cassembled from a sense oligonucleotide and an antisense oligonucleotide. Specifically, the siNAs include short interfering RNA (siRNA, double-cc stranded RNA, micro-RNA (miRNA) and short hairpin RNA (shRNA). The siNAs (can be unmodified or chemically modified, can contain cd deoxyribonucleotides, and can be chemically synthesised, expressed from a cc complexes of siRNA; and vectors that express siNA. The siNAs are used to complexes of siRNA; and vectors that express siNA. The siNAs are used to complexes of siRNA; and vectors that express siNA. The siNAs are used to complexe of siRNA; and vectors that express siNA. The siNAs are used to complexe of siRNA; and vectors that express siNA. The siNAs are used to complexe of siRNA; and vectors that express siNA. The siNAs are used to complexe of siRNA; and vectors that express siNA. The siNAs are used to complexe of siRNA; and vectors that express siNA transplants or complexes of siRNA; and vectors that express siNA. The siNAs are used to complexe of siRNA; and vectors that express siNA are also cc organisms (e.g., by ex vivo gene therapy), or in grafts and transplants or complexes, bronchiolitis, glomerulonephritis and stroke. The siNAs are also useful for drug screening, diagnosis, therapeutic target identification can validation, genetic engineering, pharmacogenomics, studying gene custoring, pharmacogenomics, studying gene contained double-stranded siNA, which is identical to the PDGFr transcript transcript is and stroke of a human pDGFr.
                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to short interfering nucleic acids (siMA) which downregulate expression of the human platelet-derived growth factor receptor (PDGFr) gene by RNA interference. The siMAS may or may not comprise ribonucleotides and may be double or single stranded. They
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2003-731605/69.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 05-FEB-2003; 2003WO-US003473

```
CC downregulate expression of the human platelet-derived growth factor comprise ribonucleotides and may be double or single stranded. They comprise ribonucleotides and may be double or single stranded. They comprise ribonucleotides and antisense regions, or alternatively are assembled from a sense oligonucleotide and an antisense oligonucleotide. Specifically, the sinAs include short interfaring RNA (siRNA, double-cc stranded RNA, micro-RNA (miRNA) and short hairpin RNA (shRNA). The siNAs can be unmodified or chemically modified, can contain cc deoxyribonucleotides, and can be chemically synthesised, expressed from a cyettor or enzymatically synthesised. The invention also relates to kits cromplexes of siRNA; and vectors that express siNA. The siNAs are used to complexes of siRNA; and vectors that express siNA, ribe siNAs are used to corganisms (e.g., by ex vivo gene therapy), or in grafts and transplants cordisates, bronchiolitis, glomerulonephritis and stroke. The siNAs are also useful for drug screening, diagnosis, therapputic target identification and validation, genetic engineering, pharmacogenomics, studying gene c function, and gene mapping (e.g., of single nucleotide polymorphisms).

The present sequence represents the upper strand of a human pDGFr transcript cargeted double-stranded siNA, which is identical to the PDGFr transcript
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             29-AUG-2002;

CC although known, have not previously been associated with schizophrenia, CC although known, have not previously been associated with schizophrenia, CC stress responses (which can precipitate exacerbate the above conditions). CC The genes can be used for screening an individual with schizophrenia, CC ADHD and/or bipolar disorder, for monitoring the progression or treatment of these conditions, for identifying agents useful in the treatment of continuous conditions, for identifying agents useful in the treatment of continuous conditions, for identifying agents useful in the treatment of continuous conditions, for identifying agents useful in the treatment of continuous conditions, for identifying agents useful in the treatment of continuous conditions and for treating or continuous conditions and for treatment of continuous conditions and continuous conditions and continuous conditions and for treatment of continuous conditions continuous conditions and for the invention continuous cont
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to the identification of genes that are differentially expressed in the frontal lobe and/or hypothalamus of a patient with schizophrenia, attention-deficit-hyperactivity disorder (ADHD) and bipolar disorder, and to the identification of genes associated with a normal or abnormal stress response related to disruption of the hypothalamo-pituitary-adrenal (HPA) axis. These genes, although the hypothalamo-pituitary-adrenal (HPA) axis. These genes,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Use of known genes associated with schizophrenia, attention-deficit-hyperactivity disorder and bipolar disorder for screening, monitoring progression or treating schizophrenia, attention-deficit-hyperactivity disorder or bipolar disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Schizophrenia; attention-deficit-hyperactivity disorder; ADHD; bipolar disorder; frontal lobe; hypothalamus; differential expression; stress response; hypothalamo-pituitary-adrenal axis; HPA axis disruption; screening; diagnosis; monitoring; prevention; drug screening; transgenic mouse; animal model; nootropic; tranquiliser; neuroleptic; expression analysis; PGK; real-time PCR; reverse transcription-PCR;
